STUDYFLOW

Study Planner Website — Project Report

A simple, responsive web application that helps students organize study goals, manage deadlines, and track completion progress.

Project Overview

StudyFlow is a front-end study planner made with HTML, CSS, and JavaScript. Students can add tasks, choose a subject, set a due date and priority, mark tasks as complete, and view progress from a dashboard. The app saves tasks in the browser using localStorage.

Objectives

- Organize study tasks in one place.
- Help students see pending and completed work.
- Track deadlines and task priority.
- Practice responsive design and JavaScript DOM manipulation.
- Persist task data between browser sessions.

Technologies Used

HTML5: structures the pages and task form.
CSS3: styles the dashboard, cards, navigation, and responsive layout.
JavaScript: handles task creation, filtering, completion, deletion, statistics, and rendering.
localStorage: saves task data in the current browser.

Main Features

- Dashboard statistics for total, completed, pending, and percentage progress.
- Task creation with title, subject, due date, and priority.
- Mark tasks complete or pending and delete unwanted tasks.
- Search tasks by title or subject and filter by status.
- Study schedule showing upcoming tasks and overdue items.
- Responsive interface for desktop, tablet, and mobile screens.

How to Run

1. Download and extract the project ZIP.
2. Open the StudyFlow_Study_Planner folder.
3. Double-click **index.html** to open it in a modern web browser.
4. Select **Add task**, enter the task details, and save. No backend or installation is required.

Project Structure

StudyFlow_Study_Planner/
■■■ index.html
■■■ style.css
■■■ script.js
■■■ README.md

Limitations and Future Scope

This is a front-end demo. Tasks are saved only in the browser where they were created; there is no cloud synchronization, account login, or automatic notification system. Future improvements could include calendar integration, reminders, weekly analytics, and cloud backup.

Project Description (under 350 characters)

StudyFlow is a responsive study planner built with HTML, CSS, and JavaScript. It helps students organize tasks by subject, deadline, and priority, mark work as complete, search and filter tasks, view progress statistics, and save their plans in browser localStorage.

Conclusion

StudyFlow demonstrates how a clean interface and core JavaScript features can help students plan their learning and monitor progress. It is easy to run locally and can be extended with more advanced study tools.
